

XM satellite radio is a valuable asset to all. I am actually hoping XM adds the instant traffic to my city since as of right now, traffic information is only available on work days and during the typical rush hour times. This does not help the public any other time of the week. In a day when regular FM radio has been overtaken by commercials, sometimes there are more commercials than there is music, XM was a welcome change. XM is not that big of a threat, I seem to remember similar arguments 10 years ago with the advent of DirecTV and that it was going to be the end of cable and broadcast TV as we know it. Now, 10 years later has that happened? No, cable and broadcast TV are going strong and satellite tv has expanded as well. I urge you to reject this petition and allow Americans to continue to exercise our rights and listen to what we want to listen to.
